

ABSTRACT

5 A printhead assembly is provided comprising at least one printhead module comprising at least two
printhead integrated circuits, each of which has nozzles formed therein for delivering printing fluid onto the
surface of print media, a support member supporting the printhead integrated circuits and having at least one
longitudinally extending channel for carrying the printing fluid, and an electrical connector for connecting
electrical signals to the printhead integrated circuits. The assembly further comprises a casing removably
mounting the printhead module and drive electronics for controlling the printing operation of the printhead
integrated circuits via the electrical connector, and at least one connector arrangement mounted to at least one
10 end of the casing, carrying at least one power terminal for power supply, at least one data terminal for data
input, and at least one fluid delivery port for fluid supply.
